How Does an Automatic Home Backup Generator Work?

Weather preparedness is crucial for having peace of mind during a power outage. A backup power solution is one way to be proactive when weather conditions change throughout the year. Honeywell Generators can provide a reliable way of ensuring the safety of your family and those important to you.

Be Prepared for Power Outages Create a Disaster Plan

- Identify a "safe spot" if a storm hits
- Pinpoint a meeting location for your family if you end up separated during a storm
- Appoint a friend who lives in a separate location as a contact for the family in case of separation

Learn the Difference Between a Watch and a Warning

* A watch means there are conditions forming for potentially severe weather in a specified area within 36 hours

*A warning means severe weather conditions have been reported and are expected within a specified area within 24 hours

Identify Potential Hazards and Protect Your Home

- Remove outdoor items that could become airborne with high winds or a severe storm
 - Clip or cut down weak trees and branches
 - Ensure gutters, window wells, and spouts are clear to minimize the risk of flood
- Cover any home openings such as windows, doors, vents

Secure Backup Power

- In the case of a power outage ensure you have lighting, food, and other items deemed necessary
- A home backup generator ensures peace of mind after storm

How Does an Automatic Home Backup Generator Work?

The generator automatically detects a power outage and delivers backup power to your home within seconds. You'll have peace of mind knowing that you're covered – the generator will keep your power running for as long as the power is out – whether that's for two hours or two weeks.

Utility Power Is Lost

Maybe it's a storm or an equipment failure. In any case, the electricity you're dependent on is suddenly gone.

Your Generator Senses a Utility Power Disruption

Within seconds, your generator prepares to restore your home's power.

Your Generator Automatically Turns On

Your generator is up to speed and generating electricity.

Your Electricity Is Restored

The automatic transfer switch sends generator power to your home and will continue providing power until your main power source returns.

Utility Power Is Restored

Your generator systems detects when utility power is returned and restores utility power to your home. The system then returns the generator to standby mode.

Schedule Your FREE In-Home Assessment

Air Pro an authorized Honeywell Generators dealer will discuss your home backup power needs with you so that they can recommend the best standby power system. They will explain installation and help you choose where your generator should be installed. They will provide you with a written estimate and you have no obligation to buy.
